DAY - 8

TASK

1. User Engagement Tracking Sheet

Created Sheet 1 — Engagement Tracking

	A	B	C	D	E	F	G	H	I	J
1	Date	DAU	Session Duration	Screen Views	Try-On Usage	Product Clicks	Add to Cart	Wishlist Saves	Returning Users	Bounce Rate
2	15-May	1300	6.2	5200	420	2100	320	180	620	36%
3	16-May	1380	6.4	5500	460	2250	350	210	660	35%
4	17-May	1450	6.7	5900	510	2400	390	250	710	33%
5	18-May	1400	6.5	5700	490	2320	370	230	690	34%
6	19-May	1550	7	6300	580	2600	440	290	780	31%
7	20-May	1650	7.3	6800	650	2850	500	330	850	29%
8	21-May	1720	7.6	7200	720	3100	560	380	910	27%
9										
10										
11										
12										
13										
...										

Add these metrics

- DAU - Daily Active Users using the app/website
- Session Duration - Average time users spend on Raritone
- Screen Views - Number of screens/pages viewed
- Try-On Usage - Number of users/actions using virtual try-on
- Product Clicks - Number of clicks on clothing products
- Add to Cart - Number of users/items added to cart
- Wishlist Saves - Products saved for later
- Returning Users - Users who came back again
- Bounce Rate - Users who left without meaningful interaction

Then added Calculated Metrics in Engagement Tracking

- Add to Cart Rate
Add to Cart Rate = Add to Cart / Product Clicks $\times 100$
- User Retention
User Retention = Returning Users / DAU $\times 100$
- Try-On Engagement Rate
Try-On Engagement Rate = Try-On Usage / DAU $\times 100$

29							
30							
31							
32							

Product View count is higher than App Open because one user can view multiple products during a session. The biggest drop-off is between Product View and Virtual Try-On, which means many users view clothes but do not use the virtual try-on feature.

Funnel analysis notes

Observation	Insight	Suggested Action
High product views but low virtual try-on usage	Users are browsing clothes but not using try-on enough	Make the Try-On button more visible on product pages
Drop-off from Virtual Try-On to Add to Cart	Some users try clothes but do not add them to cart	Show personalized recommendations, size confidence, and styling suggestions after try-on
Drop-off from Checkout to Purchase	Users may stop due to delivery charges, payment issues, or trust concerns	Simplify checkout, add COD/UPI options, show return policy clearly

The stage that needs the most improvement is Product View to Virtual Try-On. Since Raritone is a fashion-tech company, virtual try-on is a key feature. Increasing try-on usage can improve user confidence, add-to-cart rate, and purchase conversion.

5. Research findings

Shopping Behavior

Fashion Shopping Behavior Analysis

5 Key Observations

Key Observations		
No.	Observation	Explanation for Raritone
1	Users browse visually attractive products more	Fashion users spend more time on products with clear images, model photos, colors, and styling ideas
2	Users spend more time on products with size and fit information	Since clothing fit is important, users check size charts, fabric, reviews, and try-on options before purchase
3	Virtual try-on can increase confidence	Raritone's virtual try-on feature helps users visualize clothes before buying, reducing size and style confusion
4	Gen Z users prefer personalized and trend-based shopping	Gen Z users engage more with recommendations, influencer styles, trending collections, and social media-driven fashion
5	Discounts, reviews, and easy returns influence purchase decisions	Users are more likely to buy when they see offers, customer reviews, clear return policies, and trusted payment options

3 Suggestions for Improving Raritone Engagement

Suggestions for Improving Raritone Engagement		
No.	Suggestion	Why it helps
1	Promote virtual try-on on product pages	If users clearly see the "Try-On" option, more users may interact with the feature
2	Add personalized recommendations after try-on	If a user tries a dress virtually, Raritone can recommend similar dresses, matching accessories, or trending styles
3	Use wishlist and cart reminders	Reminders can bring users back and increase add-to-cart and purchase conversions

Competitor Analytics - Sheet 5

Competitor	Recommendations	Notifications	Engagement Tactics	Personalized Shopping
Myntra	Uses browsing history, wishlist, similar products, and trending styles	Sends sale alerts, wishlist reminders, cart reminders, and offer notifications	Uses big sales, influencer campaigns, style collections, and gamified offers	Personalized homepage, recommended products, size suggestions, and style-based collections
Nykaa Fashion	Recommends premium brands, designer wear, accessories, and lifestyle products	Sends new arrival alerts, sale notifications, and brand-specific offers	Uses curated collections, premium brand campaigns, and seasonal fashion edits	Personalized brand suggestions, category-based recommendations, and curated fashion feeds
AJIO	Uses category interest, discount behavior, and browsing patterns	Sends discount alerts, order updates, cart reminders, and sale notifications	Uses heavy discounts, seasonal sales, exclusive collections, and trend-based campaigns	Personalized offers, product suggestions, wishlist-based reminders, and category recommendations

Myntra, Nykaa Fashion, and AJIO use analytics to improve recommendations, notifications, engagement, and personalized shopping. Their strategies focus on understanding user behavior, showing relevant products, sending timely reminders, and encouraging users through offers and curated collections. Raritone can learn from these competitors by improving personalized recommendations, promoting virtual try-on, sending wishlist/cart reminders, and creating fashion trend-based campaigns.

6. Daily Progress Summary

Day 8 as a Data Analyst Intern

Today, I created a detailed user engagement tracking sheet for Raritone using sample data. The sheet included important engagement metrics such as Daily Active Users, session duration, screen views, virtual try-on usage, product clicks, add-to-cart rate, wishlist saves, user retention, and bounce rate.

I analyzed fashion shopping behavior and identified key observations about how users browse fashion apps, why they spend more time on certain products, what influences purchase decisions, and common shopping patterns among Gen Z users.

I also created a conversion funnel for Raritone with the stages: App Open, Product View, Virtual Try-On, Add to Cart, Checkout, and Purchase. The analysis showed that the biggest improvement area is the Product View to Virtual Try-On stage, because virtual try-on is a key feature of Raritone.

I improved the KPI dashboard by adding charts for DAU growth, virtual try-on usage, user retention, growth comparison, and user flow visualization.

I researched competitor analytics strategies used by Myntra, Nykaa Fashion, and AJIO. The research focused on recommendations, notifications, engagement tactics, and personalized shopping.

Overall, Day 8 helped me understand how user engagement tracking, virtual try-on analytics, funnel analysis, and competitor research can support better decision-making for a fashion-tech company like Raritone.
