

Day 12

TASK

1. Customer Intelligence Analysis

3 Customer Intelligence Profiles				
Profile	User Preferences	Shopping Frequency	Engagement Level	Fashion Interests
Trend-Focused Gen Z	Trending outfits, western wear, influencer styles	3–4 times/week	High	Streetwear, casual fashion
Occasion Shopper	Party wear, ethnic wear, festive collections	1–2 times/month	Medium	Sarees, dresses, festive outfits
Loyal Repeat Buyer	Comfortable daily wear, trusted brands	Weekly	High	Casual wear, workwear

Intelligence Insights

Insight	Observation
Most engaged users	Gen Z users aged 18–24
Most preferred category	Ethnic & Party Wear
Highest shopping frequency	Trend-focused users
Strongest retention group	Loyal repeat buyers

2. Purchase Prediction Analysis

Factors Affecting Purchases

Factor	Impact
Product Views	High
Virtual Try-On Usage	Very High
Wishlist Saves	High
Session Duration	Medium
Reviews Viewed	High
Discounts Seen	Medium

Prediction Model

User Segment	Engagement Score	Purchase Probability
High Engagement	90	Very High
Active Users	75	High
Medium Users	55	Medium
Low Engagement	30	Low

Purchase Prediction Insight

Users with high virtual try-on usage, longer session duration, and multiple product interactions show the highest purchase probability.

Chart- Engagement Score vs Purchase Probability

3. Try-On Engagement Report

Most Used Try-On Categories

Category	Usage Score
Party Wear	95
Ethnic Wear	90
Dresses	85
Casual Wear	75
Workwear	60

Why Users Use Virtual Try-On

Reason	Benefit
Check appearance	Better confidence
Compare styles	Easier decision making
Check colors	Improved satisfaction
Explore outfits	Higher engagement

Features Increasing Try-On Usage

Feature	Impact
AI Styling Suggestions	High
Size Recommendation	High
Similar Outfit Suggestions	Medium
Social Sharing	Medium

Engagement Insight

Party wear and ethnic wear generate the highest virtual try-on engagement. Users are more likely to purchase after trying outfits virtually.

4. Retention Strategy Document

Research Areas

Strategy	Effect
Personalized Recommendations	High retention
Wishlist Reminders	Return visits
Loyalty Rewards	Repeat purchases
Push Notifications	Re-engagement
Try-On Based Suggestions	Better engagement

5 Retention Improvement Ideas

No	Idea
1	Personalized recommendations based on try-on history
2	Loyalty points for repeat purchases
3	Wishlist price-drop alerts
4	AI-powered outfit suggestions
5	Virtual try-on challenges and rewards

5. Advanced Dashboard

Chart 3 - Shopping Frequency by Customer Profile

Customer Profile	Shopping Frequency Score
Trend-Focused Gen Z	90
Occasion Shopper	60
Loyal Repeat Buyer	80

Shopping Frequency by Customer Profile

6. Daily Summary

Today I completed customer intelligence and prediction analytics for Raritone. I analyzed user preferences, shopping frequency patterns, engagement categories, and fashion interest groups. Three customer intelligence profiles were created to better understand different user segments.

I researched purchase prediction factors including engagement levels, session duration, product interactions, and virtual try-on usage. A purchase prediction model was developed to identify high purchase probability users and low engagement users.

I also analyzed virtual try-on behavior, identifying the most popular categories and features that increase try-on usage. In addition, I researched retention strategies including personalized recommendations, loyalty programs, notifications, and AI-powered engagement techniques.

Finally, I updated the dashboard with customer intelligence metrics, prediction analytics, retention insights, and try-on engagement charts. This task improved my understanding of customer intelligence, predictive analytics, and user retention strategies for a fashion-tech company like Raritone.
