

DAY 5

TASK

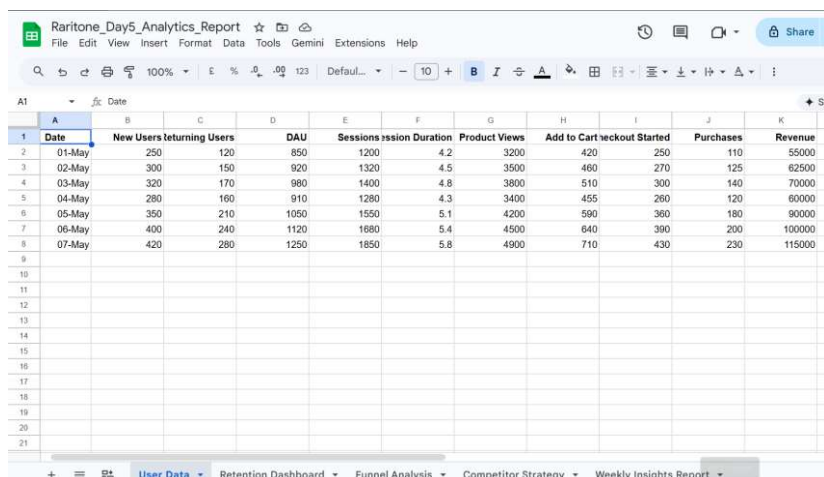

Used one Google Sheets file named:

Raritone_Day5_Analytics_Report

I have used [Google Sheets](#) as the main tool. [Power BI](#) and [Google Analytics](#) are optional/reference platforms for this task.

User Data

Sample Data

1	Date	New Users	Returning Users	DAU	Sessions	Session Duration	Product Views	Add to Cart	Checkout Started	Purchases	Revenue
2	01-May	250	120	850	1200	4.2	3200	420	250	110	55000
3	02-May	300	150	920	1320	4.5	3500	460	270	125	62500
4	03-May	320	170	980	1400	4.8	3800	510	300	140	70000
5	04-May	280	160	910	1280	4.3	3400	455	280	120	60000
6	05-May	350	210	1050	1550	5.1	4200	590	360	180	90000
7	06-May	400	240	1120	1680	5.4	4500	640	390	200	100000
8	07-May	420	280	1250	1850	5.8	4900	710	430	230	115000

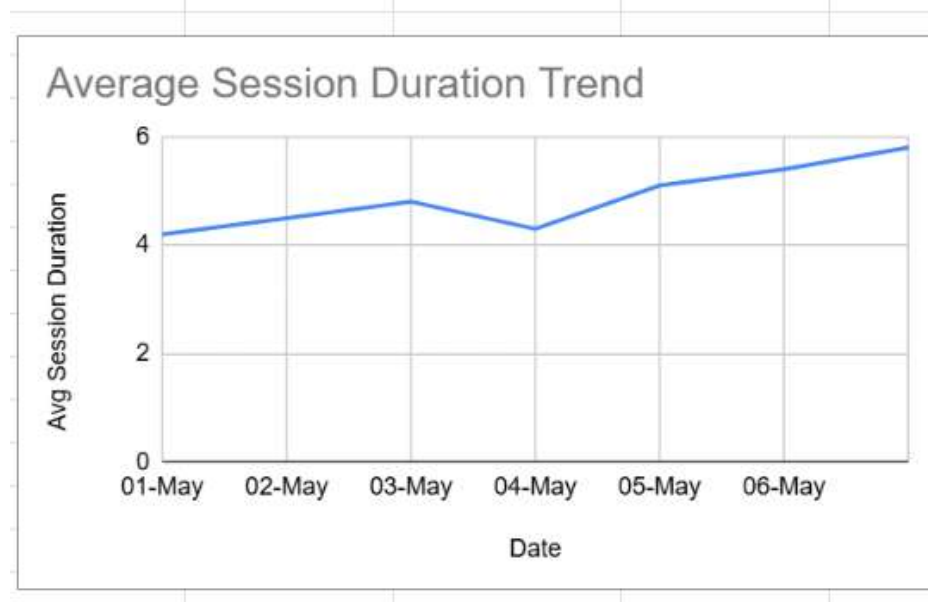

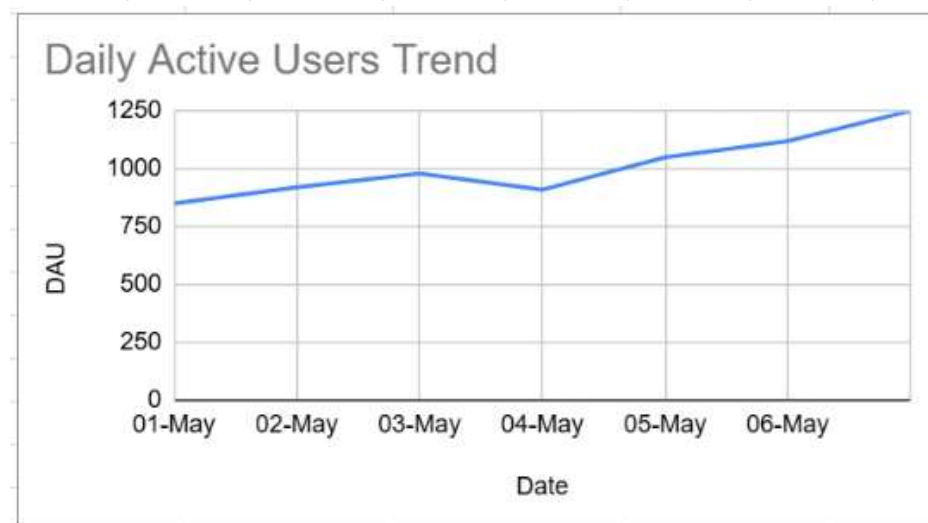

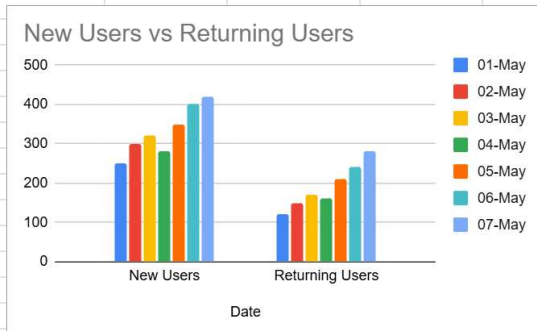

Retention Dashboard

Adding KPI Cards like

In **Retention Dashboard**, type these headings like

- Total New Users
- Total Returning Users
- Retention Rate
- Average DAU

A	B	C	D	E	F	G	H
Raritone User Retention Dashboard							
Total New Users		Toatal Returning Users		Retention Rate		Average DAU	
2320		1330		57.33%		1011.428571	

Total New Users

=SUM('User Data'!B2:B8)

Total Returning Users

=SUM('User Data'!C2:C8)

Retention Rate

=C4/A4

Format the result as percentage.

Average DAU

=AVERAGE('User Data'!D2:D8)

Chart 1: New Users vs Returning Users

It shows whether Raritone is only getting new users or also bringing users back.

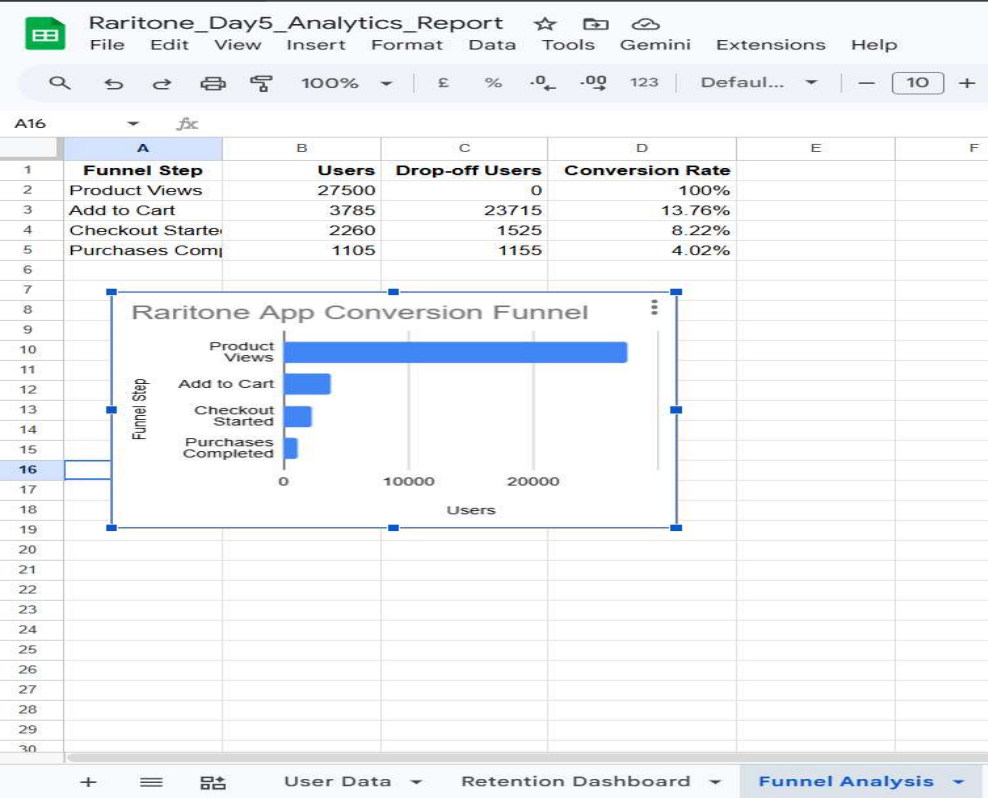

Chart 2: DAU Trend

This chart shows whether daily active users are increasing or decreasing.

Chart 3: Average Session Duration

This chart shows whether users are spending more time on the app.

Funnel Analysis

Funnel Chart shows how users reduce at each step.

Funnel Analysis Notes

Observation	Insight	Suggested Action
High product views but low add-to-cart	Users are browsing but not adding many products to cart	Improve product images, prices, descriptions, size charts, and offers
Drop-off from Add to Cart to Checkout	Some users may hesitate before checkout	Show delivery charges clearly and simplify checkout steps
Drop-off from Checkout to Purchase	Some users may stop due to payment or trust issues	Add more payment options, COD, secure payment badges, and clear return policy

Summary

The conversion funnel shows how users move from viewing products to completing purchases. Raritone has 27,500 product views, but only 1,105 purchases. The biggest drop-off is between

Product Views and Add to Cart, which means many users view products but do not show purchase intent.

Summary

Myntra, AJIO, and Nykaa Fashion use analytics to understand user behavior, product interest, traffic sources, and purchase patterns. Their main strategies include personalized recommendations, offers, wishlist reminders, smooth checkout, and app notifications. Raritone can improve by tracking user journeys, reducing funnel drop-offs, improving product details, and building a better retention strategy.

Weekly Insights Report

- 1. Overview

This weekly analytics report summarizes Raritone's user retention, engagement, conversion funnel, and competitor analytics strategies. The analysis is based on sample user data created for a one-week period.

Note: This dashboard is created using sample weekly data for Raritone because real company analytics data is not available. Competitor analysis is based on publicly available app features, reviews, and common user complaints.

2. User Retention Insights

Raritone recorded 2,320 new users and 1,330 returning users during the week. The overall retention rate is 57.33%, which indicates that more than half of the new users returned to the platform.

This is a positive sign because returning users are more likely to browse products, add items to cart, and complete purchases.

3. User Engagement Insights

Daily active users increased from 850 on 01-May to 1,250 on 07-May. This shows that user activity improved throughout the week.

Average session duration also increased from 4.2 minutes to 5.8 minutes, which means users spent more time exploring products. Product views increased from 3,200 to 4,900, showing stronger browsing behavior.

4. Conversion Funnel Insights

The conversion funnel shows the following user journey:

Product Views → Add to Cart → Checkout Started → Purchases Completed

Raritone had 27,500 product views, 3,785 add-to-cart actions, 2,260 checkout starts, and 1,105 completed purchases.

The largest drop-off happened between Product Views and Add to Cart. This means many users viewed products but did not add them to cart.

Possible reasons include:

- Price not attractive
- Product images not clear
- Size or color information missing
- Delivery charges not visible
- Lack of offers or discounts

5. Competitor Analytics Insights

Competitors like Myntra, AJIO, and Nykaa Fashion use analytics to improve user experience and sales.

Myntra focuses on personalized recommendations, wishlist reminders, and large product collections.

AJIO uses discounts, seasonal offers, and category-based promotions.

Nykaa Fashion focuses on premium brands, curated collections, and trust-building product presentation.

Raritone can learn from these strategies and improve its own analytics approach.

6. Recommendations for Raritone

Raritone should focus on the following improvements:

1. Improve product images and descriptions.
2. Add clear size charts and color details.
3. Show delivery charges before checkout.
4. Use wishlist reminders and app notifications.
5. Offer discounts for first-time users.
6. Reduce checkout steps.
7. Track funnel drop-offs weekly.
8. Improve return and refund communication.
9. Promote best-performing products.
10. Build personalized recommendations.

7. Conclusion

The weekly analytics report shows that Raritone has improving user engagement and a good retention rate. However, the conversion funnel shows a major drop-off between product views and add-to-cart actions. By improving product presentation, checkout experience, offers, and user communication, Raritone can increase conversions and customer retention.
