I

E32	A	B	C	D	E
1	User Type	Behavior	Engagement Level	Retention Probability	Raritone Action
2	Frequent Shoppers	Purchase often, browse new arrivals, use wishlist	High	Very High	Give loyalty rewards and early access to new collections
3	New Users	Recently joined, exploring app features	Medium	Medium	Show onboarding, first-order offer, and virtual try-on guide
4	Active Users	Visit regularly, view products, click categories	High	High	Send personalized recommendations and trending outfit suggestions
5	Inactive Users	Have not opened app recently	Low	Low	Send reactivation offers and reminder notifications
6	High Engagement Users	Spend more time, view many screens, save wishlist items	Very High	High	Promote premium features, style collections, and try-on suggestions
7	Virtual Try-On Users	Use try-on feature frequently before purchase	Very High	Very High	Recommend similar outfits after try-on and track try-on-to-cart conversion
8	Cart Abandoners	Add products to cart but do not purchase	Medium	Medium	Send cart recovery notifications and limited-time coupons
9	Wishlist Users	Save products but delay purchase	Medium	High	Send wishlist price-drop alerts and stock reminders
10					

User segmentation helps Raritone understand different types of users based on their shopping behavior. Since Raritone provides virtual try-on of clothes, users who frequently use virtual try-on are highly valuable because they show strong purchase interest.

Segmentation helps Raritone send the right offers, recommendations, and notifications to the right users.

2.Fashion Shopping Trends Research

Sheet 2 — Fashion Trends Research

Fashion Trends Research Summary for Raritone

Fashion e-commerce is becoming more personalized, visual, and technology-driven. Users, especially Gen Z, prefer shopping experiences that are fast, interactive, personalized, and influenced by social media trends. Trending categories often include casual wear, ethnic wear, western wear, streetwear, activewear, accessories, and occasion-based outfits.

Gen Z shoppers usually browse fashion apps for inspiration, discounts, new arrivals, influencer styles, and personalized recommendations. They are more likely to engage with visual content, short videos, reviews, wishlist features, and social media-driven fashion campaigns.

AI-powered recommendations are becoming important in fashion e-commerce because they help users discover relevant products based on browsing history, wishlist activity, previous purchases, product clicks, and style preferences. Personalized recommendations can increase product discovery, add-to-cart actions, and repeat visits.

Virtual try-on adoption is also growing in fashion e-commerce. Virtual try-on helps users visualize how clothes may look before buying. This can reduce size and fit confusion, increase user confidence, improve engagement, and reduce returns. For a fashion-tech company like Raritone, virtual try-on is a key feature that can improve both user experience and conversion rate.

Overall, fashion shopping is moving toward AI-driven personalization, interactive product discovery, social media influence, and virtual try-on experiences. Raritone can use these trends to improve engagement, retention, and purchase conversion.

Research Table

Research Topic	Finding	Why It Matters for Raritone
Trending Fashion Categories	Casual wear, ethnic wear, western wear, streetwear, activewear, accessories, and occasion wear are commonly popular	Raritone can track most viewed categories and promote trending collections
Gen Z Shopping Habits	Gen Z prefers visual content, influencer styles, discounts, fast browsing, personalization, and social media trends	Raritone should use short visuals, trend-based collections, and personalized recommendations
AI Recommendations	AI can suggest products based on browsing history, wishlist, clicks, try-on usage, and purchases	Raritone can improve product discovery and increase add-to-cart rate
Virtual Try-On Adoption	Virtual try-on helps users visualize clothes before purchase and can improve confidence	Raritone should promote try-on usage and track try-on-to-purchase conversion
Social Commerce	Fashion discovery often happens through Instagram, creators, short videos, and influencer content	Raritone can use social campaigns to increase app visits and try-on usage

Recent fashion e-commerce research highlights virtual try-on and personalized styling as ways to make online shopping more interactive; Gen Z fashion research also connects virtual try-on with engagement and loyalty in online fashion retail. AI is increasingly used for product recommendations, styling support, and personalization, but users still care about trust, authenticity, and privacy.

5 insights useful for Raritone

No.	Insight Useful for Raritone	Action
1	Virtual try-on can increase shopping confidence	Make Try-On button visible on product pages
2	Gen Z users prefer personalized and trend-based shopping	Show trending outfits and influencer-style collections
3	AI recommendations can improve product discovery	Recommend similar clothes after product view or try-on
4	Social media influences fashion discovery	Promote try-on reels, new arrivals, and styling videos
5	Trust and privacy are important for AI-based fashion tools	Clearly explain how try-on data is used and protect user privacy

3.Retention Analysis Task

Sheet 3 — Retention Analysis

Retention Topic	Reason / Feature	Explanation for Raritone
Why Users Return	Personalized recommendations	Users return when they see products matching their style
Why Users Return	Wishlist reminders	Users come back when saved products have discounts or stock alerts
Why Users Return	Virtual try-on experience	Users may return to try more outfits digitally before buying
Why Users Return	Discounts and offers	Offers encourage users to revisit and purchase
Why Users Return	Easy returns and trust	Clear return policy increases confidence
Why Users Uninstall	Too many notifications	Users may uninstall if notifications are frequent or irrelevant
Why Users Uninstall	Poor app performance	Slow loading or errors reduce user satisfaction
Why Users Uninstall	Irrelevant recommendations	Users lose interest if suggestions do not match their style
Why Users Uninstall	Complicated checkout	Users may leave if purchase process is difficult
Why Users Uninstall	Privacy concerns	Users may worry about photo/data usage in virtual try-on

Retention improvement suggestions for Raritone

No.	Retention Improvement Suggestion	Why It Helps
1	Send personalized recommendations based on try-on history	Makes users feel the app understands their style
2	Use wishlist price-drop and stock alerts	Brings users back when they are likely to purchase
3	Improve virtual try-on accuracy and speed	Better experience increases trust and repeated usage
4	Reduce irrelevant notifications	Prevents users from uninstalling the app
5	Add loyalty rewards for repeat users	Encourages repeat purchases
6	Make return/refund policy clear	Builds confidence before purchase
7	Improve app loading speed and checkout flow	Reduces frustration and drop-offs

Retention **Chart data**

F	G
Date	Retention Rate
15-May	47.69%
16-May	47.83%
17-May	48.97%
18-May	49.29%
19-May	50.32%
20-May	51.52%
21-May	52.91%

Heatmap observations

Observation	Meaning	Action for Raritone
6 PM - 9 PM has highest activity	Users are most active in the evening	Send notifications and offers during evening time
Product Page has high interaction	Users spend more time browsing clothes	Improve product images, size guides, and reviews
Virtual Try-On is strongest in evening	Users prefer trying clothes when they have free time	Promote try-on campaigns during evening
Checkout is lower than cart activity	Some users hesitate before purchase	Improve checkout, payment options, and return policy
Wishlist activity is moderate	Users save products for later	Send wishlist reminders and price-drop alerts

Chart

Feature Engagement by Time Slot

5. Notification & Recommendation Analysis

Sheet 5 — Notification Ideas

A	B	C	D
Type	Idea	Example Notification	Purpose
Smart Notification	Wishlist price-drop alert	"Your saved kurti is now 20% off. Try it on before it sells out!"	Bring wishlist users back
Smart Notification	Cart recovery reminder	"You left this outfit in your cart. Complete your order today and get free delivery."	Reduce cart abandonment
Smart Notification	Try-on reminder	"New arrivals are ready for virtual try-on. See how they look on you!"	Increase try-on usage
Personalized Recommendation	Similar outfit recommendation	Recommend similar dresses after a user tries one virtually	Improve product discovery
Personalized Recommendation	Complete-the-look suggestion	Suggest matching accessories, bottoms, or footwear	Increase basket size
Personalized Recommendation	Style-based collection	Show ethnic, casual, party, or office wear based on user behavior	Improve personalization

Notifications improve engagement by bringing users back at the right time with relevant messages. Personalized recommendations improve shopping by showing products that match user interests, browsing behavior, wishlist activity, and virtual try-on history. For Raritone, smart notifications and recommendations should focus on virtual try-on, wishlist reminders, cart recovery, and personalized outfit suggestions.

6. Dashboard Enhancement

7.Daily Summary

Day 9 Daily Summary — Data Analyst Intern

Today, I completed user segmentation for Raritone based on shopping behavior, engagement level, retention probability, and virtual try-on usage. I also researched fashion shopping trends, Gen Z habits, AI recommendations, and virtual try-on adoption.

I prepared retention analysis, smart notification ideas, personalized recommendation ideas, and an engagement heatmap showing active times and high-interaction sections. I also updated the dashboard with user segments, retention charts, trend analysis, and engagement graphs.

Overall, Day 9 helped me understand how segmentation, retention, heatmaps, notifications, and recommendations can improve user engagement for Raritone.
