PROJECT SUMMARY REPORT

Raritone Summer Internship 2026

Data Analytics Internship

1. INTRODUCTION

The Raritone Summer Internship 2026 provided an opportunity to gain practical experience in data analytics, business intelligence, customer behavior analysis, and fashion e-commerce research. As a Data Analyst Intern, the primary objective was to understand how data can be used to improve customer engagement, retention, conversion rates, and overall business performance.

Raritone is a fashion-tech company that focuses on virtual try-on technology, enabling users to visualize clothing before making purchase decisions. Throughout the internship, several analytical projects were completed to study user interactions, shopping behavior, customer retention patterns, virtual try-on engagement, competitor strategies, and fashion industry trends.

The internship emphasized the importance of data-driven decision-making and demonstrated how analytics can support business growth and customer satisfaction.

2. OBJECTIVES OF THE INTERNSHIP

The main objectives of the internship were:

- To understand customer behavior in fashion e-commerce platforms.
- To analyze user engagement and retention metrics.
- To study virtual try-on adoption and its impact on purchase decisions.
- To build dashboards for monitoring business performance.
- To research competitor platforms and industry trends.
- To identify opportunities for improving customer experience and business growth.
- To develop analytical, reporting, and business intelligence skills.

3. WORK COMPLETED DURING THE INTERNSHIP

Throughout the internship, multiple tasks and projects were completed covering different aspects of analytics and business intelligence.

Major activities included:

- KPI Dashboard Creation
- User Engagement Analysis
- Customer Retention Analysis
- Conversion Funnel Analysis
- Customer Segmentation
- Customer Intelligence Research
- Fashion Trend Research
- Competitor Benchmarking
- Marketing Analytics
- AI Recommendation System Research
- Virtual Try-On Analytics
- Purchase Prediction Analysis
- Business Intelligence Reporting
- Dashboard Development and Visualization

Various reports and dashboards were created using Google Sheets and analytical frameworks to generate meaningful insights.

4. ANALYTICAL FINDINGS

Several important findings emerged from the analysis conducted during the internship.

User Engagement Findings

The analysis showed that users who interact with the virtual try-on feature spend more time on the platform and explore a larger number of products. Personalized recommendations also contributed to increased engagement and product discovery.

Retention Findings

Retention analysis indicated that users are more likely to return when they receive personalized recommendations, wishlist reminders, and targeted notifications. Loyalty programs and reward-based systems also contribute positively to customer retention.

Conversion Funnel Findings

The customer journey was analyzed through a conversion funnel consisting of:

- App Visit
- Product View
- Virtual Try-On
- Add to Cart
- Checkout
- Purchase

The analysis revealed that virtual try-on users demonstrate stronger purchase intent compared to users who do not engage with the feature. Reducing drop-offs between product viewing and virtual try-on can significantly improve conversion rates.

Customer Intelligence Findings

Customer segmentation helped identify different user groups such as active users, frequent shoppers, high-engagement users, and virtual try-on users. These segments showed different behavioral patterns and purchasing tendencies, highlighting the importance of personalization.

5. FASHION E-COMMERCE RESEARCH

Research was conducted to understand current trends in the fashion e-commerce industry.

The study focused on:

- Gen Z shopping behavior
- Social media influence on purchasing decisions
- Personalized shopping experiences
- AI-powered recommendation systems
- Virtual try-on adoption
- Customer retention strategies

Key observations included:

- Customers increasingly expect personalized experiences.
- Social media plays a major role in fashion discovery.
- AI recommendations improve customer engagement.
- Interactive shopping experiences increase purchase confidence.
- Virtual try-on technology is becoming an important differentiator in fashion retail.

These findings demonstrate that innovation and personalization are essential for long-term growth in the fashion technology sector.

6. COMPETITOR ANALYSIS

Several leading fashion e-commerce platforms were studied, including:

- Myntra
- AJIO
- Nykaa Fashion
- Amazon Fashion

The analysis focused on:

- Recommendation systems
- Engagement features
- Loyalty programs
- Customer retention techniques
- Product discovery methods

The research revealed that successful platforms invest heavily in personalization, targeted promotions, customer loyalty programs, and AI-driven recommendations.

Competitor benchmarking provided valuable insights that can help Raritone improve user engagement and strengthen its competitive position.

7. BUSINESS INTELLIGENCE INSIGHTS

The internship demonstrated how analytics can support business decision-making.

Important business intelligence findings included:

- Virtual try-on improves purchase confidence.
- Personalized experiences increase engagement.
- Retention is strongly linked to recommendation quality.
- Customer segmentation improves targeting effectiveness.
- Fashion trends significantly influence purchasing behavior.
- Data visualization improves business understanding and decision-making.

These insights can help businesses identify growth opportunities and optimize customer experiences.

8. RECOMMENDATIONS FOR RARITONE

Based on the research and analysis conducted throughout the internship, the following recommendations are suggested:

1. Enhance AI-powered recommendation systems to improve personalization.
2. Increase visibility and accessibility of virtual try-on features throughout the shopping journey.
3. Implement loyalty and rewards programs to improve customer retention.
4. Use personalized notifications based on browsing, wishlist, and try-on behavior.
5. Introduce complete-the-look recommendations and AI styling suggestions.
6. Improve customer segmentation and targeted marketing strategies.
7. Continue investing in virtual try-on innovation to strengthen competitive advantage.

These recommendations can contribute to higher engagement, stronger retention, and increased conversion rates.

9. KEY LEARNINGS

The internship helped develop practical skills in:

- Data Analytics
- Dashboard Development
- Customer Behavior Analysis
- Business Intelligence
- Data Visualization
- KPI Tracking

- Conversion Funnel Analysis
- Customer Segmentation
- Competitor Research
- Reporting and Documentation

The experience also improved analytical thinking, problem-solving abilities, and understanding of how data supports business growth.

10.CONCLUSION

The Raritone Summer Internship 2026 provided valuable exposure to analytics, customer intelligence, virtual try-on technology, and fashion e-commerce business strategies. Through various analytical projects, dashboards, and research activities, important insights were generated regarding customer behavior, engagement, retention, and conversion performance.

The internship successfully enhanced technical and analytical skills while providing practical experience in applying data-driven approaches to real business challenges. The knowledge gained during this internship will be valuable for future academic, professional, and analytical pursuits.

Thank you to the Raritone team for providing this opportunity to learn, contribute, and grow as a Data Analyst Intern.
